13. ABSTRACT (Maximum 200 words)			
<p>The Shuttle Upper Atmosphere Mass Spectrometer (Sums), a component experiment of the NASA Orbital Experiments Program (OEX), was flown aboard the shuttle Columbia (OV102) mounted at the forward end of the nose landing gear well with an atmospheric gas inlet system fitted to the lower fuselage (chin panel) surface. The Sums was designed to provide atmospheric data in flow regimes inaccessible prior to the development of the Space Transportation System (STS).</p> <p>The experiment mission operation begins about 1 hour prior to shuttle de-orbit entry maneuver and continues until reaching 1.6 torr (about 86 km altitude). The Sums flew a total of three missions, 61C, STS-35, and STS-40. Between flights, the Sums was maintained in flight ready status at the physics laboratory of UTD. The flight data has been analyzed by the NASA LaRC Aerothermodynamics Branch. Flight data spectrum plots and reports are presented in the Appendices to the Final Technical Report for NAS1-17399 as follows:</p>			
Attachment A: Flight 61-C Report (Vol. 2) Attachment B: Flight STS-35 Report (Vol. 3, Vol. 4, Vol. 5, Vol. 6, Vol. 7, and Vol. 8)		Attachment C: Flight STS-40 Report (Vol. 9) Attachment D: Sums Software Listing (Vol. 9)	
14. SUBJECT TERMS			15. NUMBER OF PAGES
Mass spectrometer, upper atmosphere, rarefied-flow aerodynamics, shuttle reentry
